1.This application contains claims directed to the following patentably distinct species:

Species A, that directed to applying the coating and then thermoforming to make reflective surfaces and displace portions between the surfaces to form light transmissive surfaces (ie, claims 1-10); and

Species B, that directed to forming first and second surfaces and coating those which are to be reflective (ie, claims 12-19).

The species are independent or distinct because the displacement of portions between the coated surfaces as required for Species A is not required for Species B. In essence, Species B is directed to a selective coating process while Species A is directed to a selective molding process.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after

the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

2. Comments directed to the art rejection and applicant's amendment will be held in abeyance pending an election.
